Ultracast® PR/PPR/PRX

High pressure laminate (HPL) presses require an exceptionally resistant paper to maintain texture integrity. Ultracast PR & PPR retain the desired texture under loads exceeding 1200 psi (82.74 bar) up to 425F (218C). Ultracast PRX offers increased flexibility, lower curl, and lower gloss levels in a select offering of textures.

Ultracast® PRC/PPRC

Developed to meet the demands of a continuous pressure laminate (CPL) machines with a greater degree of mechanical flexibility and moisture stability. Ultracast PRC/PPRC is post dried to 1.5% moisture to eliminate vapor marking on press. The Ultracast PRC family shares all the textures found in Ultracast PR.

sappi | Ultracast

The Ultracast product line is the pinnacle of technology. Capturing 100% of the intended texture without relying on mechanical embossing of soft thermoplastic films, Ultracast locks the texture into a robust and durable acrylic matrix; impervious to heat or usage, the texture remains unfazed. No gloss shifts to worry about, no fidelity loss with use, 100% of the intended texture 100% of the time.
